Features

- Extends Coverage for Ring Devices
- Built-In Night Light
- 30+ Classic & Seasonal Tones
- Adjustable Volume
- Snooze Alerts

Connectivity

- 2.4 GHz Wi-Fi

Dimensions

- 4.1" x 2.8" x 1"

Frequently Asked Questions

How does Chime work?

When plugged into a standard wall socket, the Chime or Chime Pro produces an audio signal whenever you receive an alert from a Ring device.

What is the difference between Chime Pro and Chime?

The main differences are Chime Pro extends wifi coverage for Ring devices, has dual-band 2.4GHz & 5GHz wifi connectivity (vs 2.4GHz only), a built-in nightlight, and guided feedback during the setup process to help you find the best location for your Chime Pro.

Both Chime Pro and Chime are compatible with all existing Ring Video Doorbells and Security Cameras, plug into standard wall outlets, and let you hear real-time notifications anywhere in your home.

What is the difference between Chime Pro and a mesh network like eero?

A Chime Pro is the simplest solution if you want to expand and improve coverage only to your Ring devices, directly from your Ring app. An alternative solution to improve household connectivity would be to install a mesh wifi device such as eero, which can amplify your internet connection to reduce weak wifi areas in your home, improving connectivity for all your smart devices.

The Ring App is required for setup and is compatible
with iOS, Android, Mac and Windows 10 Devices
